We thought it would be a good idea to build a street rod on paper to show you what the parts could cost. The prices we are using were taken from magazine ads, so that are close but not exact. In fact, you may be able to get much better deals, so it pays to search around and talk with multiple manufacturers.

We are basing these prices on a reproduction body & chassis package. The interior price includes material and labor. We will present the low-end and high-end prices. But remember they are approximations and that you may use high-end parts in some areas and low-end parts in others. Following is a basic idea of parts cost, **without labor**.
